

Software Engineering Design Technical Skill Assessment

Performance Level	Dimension 1 Identify and analyze customer software needs and requirements.	Dimension 2 Design a software application	Dimension 3 Produce (code) a computer application.	Dimension 4 Test Project to see if it satisfies customer & software requirements	Dimension 5 Provide user documentation & user installation procedures
Exceptional	<ul style="list-style-type: none"> Functional Requirements are gathered & analyzed to remove ambiguity, contradictions, & identify missing requirements 	<ul style="list-style-type: none"> Design of UI is intuitive & demonstrates attention to usability & fully supports requirements All Essential Algorithms identified & supporting data structures are well-chosen 	<ul style="list-style-type: none"> Product satisfies all essential functional requirements Product works and solution meets professional efficiency standards Code is self-documenting & well-commented 	<ul style="list-style-type: none"> Test Plan includes test cases that test boundary conditions and validates user input Test Plan was followed that covered all test cases, most bugs identified & fix 	<ul style="list-style-type: none"> User manual provided complete, clear, well-structured & well-written Installation procedures are fully described & includes trouble-shooting for common installation errors
Exceeds	<ul style="list-style-type: none"> Functional requirements are gathered & analyzed to remove ambiguity & contradictions 	<ul style="list-style-type: none"> Design of UI is intuitive & supports requirements well All Essential Algorithms identified & well described Employs appropriate data structures 	<ul style="list-style-type: none"> Product satisfies almost all of the essential functional requirements Product works and solution is efficient Code is readable & comments describe intention of programmer 	<ul style="list-style-type: none"> Test Plan includes test cases that test boundary conditions Test plan was followed, some bugs identified and fixed 	<ul style="list-style-type: none"> User manual provided is complete and clear (easily understood) Installation procedures are fully described
Proficient (Meets)	<ul style="list-style-type: none"> Gathers most of the functional requirements 	<ul style="list-style-type: none"> Design of UI supports requirements Essential Algorithms identified & described Employs appropriate data structures 	<ul style="list-style-type: none"> Product satisfies most of the essential functional requirements Product works, but not efficiently Code is readable & comments are present, but not sufficient 	<ul style="list-style-type: none"> Test Plan includes test to verify that most of the requirements have been satisfied Test plan was followed & bugs identified 	<ul style="list-style-type: none"> User manual provided is complete Installation procedures are somewhat complete
Basic/Fair	<ul style="list-style-type: none"> Gathers some of the functional requirements 	<ul style="list-style-type: none"> UI is unintuitive & inconsistent Essential Algorithms are sometimes identified & not described 	<ul style="list-style-type: none"> Product satisfies only some of the essential functional requirements Code is disorganized, 	<ul style="list-style-type: none"> Test plan exists, but is incomplete Test plan never used 	<ul style="list-style-type: none"> User manual provided, but incomplete No installation procedures are

		<ul style="list-style-type: none"> • Employs poor selection of data structures 	& poorly documented		provided
Limited/Emerging	<ul style="list-style-type: none"> • Gathers little or none of the functional requirements 	<ul style="list-style-type: none"> • UI is unusable or incomplete • Algorithms if they are used are undocumented • Does not employ any appropriate data structures 	<ul style="list-style-type: none"> • Product satisfies only few or none of the functional requirements • Code fails to function 	<ul style="list-style-type: none"> • No test plan exists 	<ul style="list-style-type: none"> • No user manual • No installation procedures

When choosing a project, students must choose a relevant and rigorous project. The project has to have an identified user. It needs to pass Acceptance Testing – client says “it’s acceptable”. And students need to create a test case to verify each specific requirement has been met.
